Challenge for economic policy: Norwegian export sector is vulnerable

Norwegian real exchange rate. Deviation from mean over the period. Per cent.

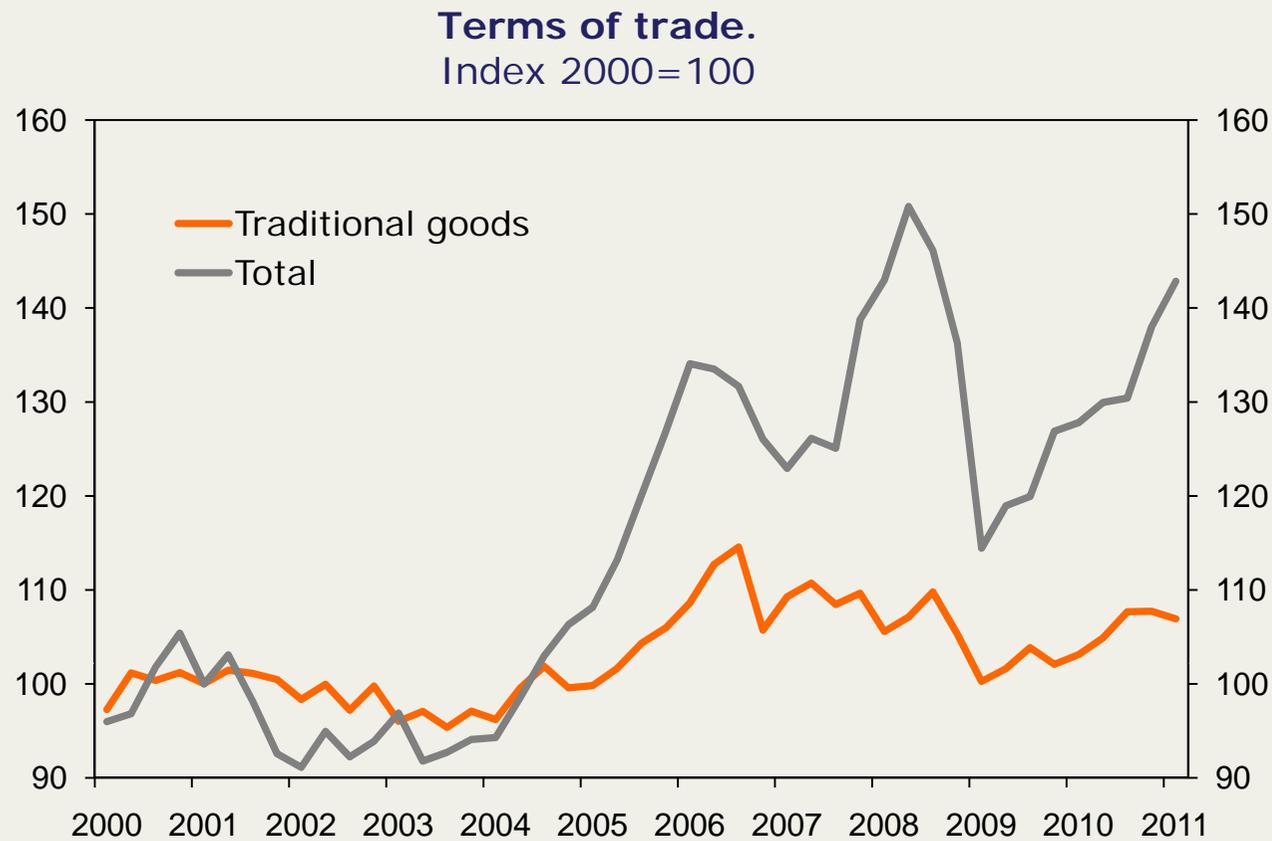

Employment in the manufacturing sector
1000 persons

Sources: Norges Bank and Statistics Norway

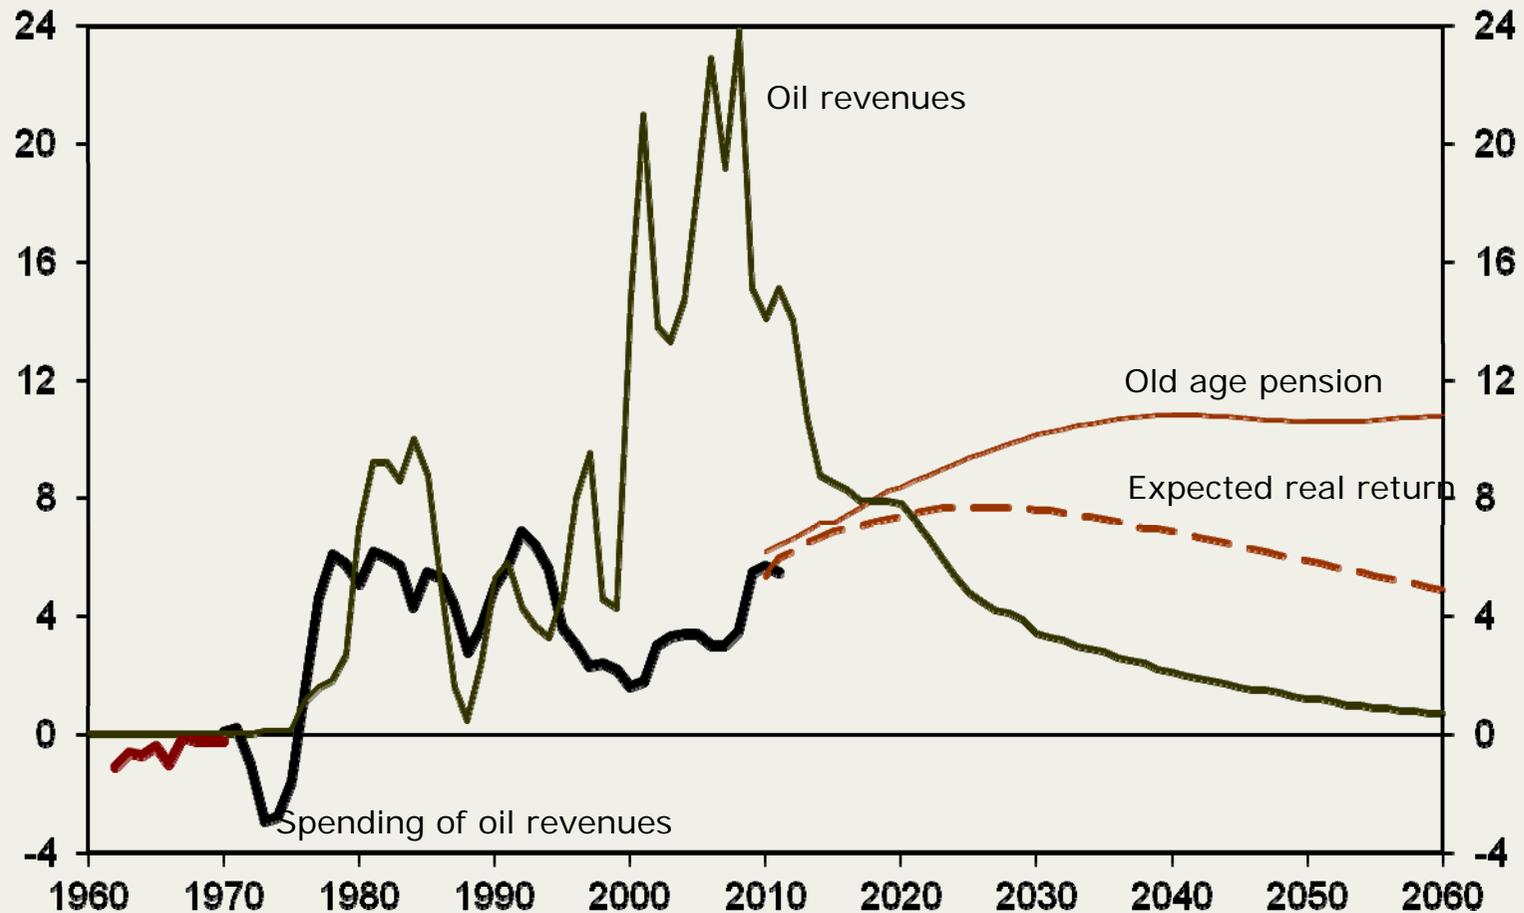

High prices on Norwegian export goods have contributed to high profitability in manufacturing despite high costs

Sources: Statistics Norway and Ministry of Finance

Challenge for economic policy II: The phasing in of oil revenues is soon to peak whereas the increase in pension spending lies ahead of us

Per cent of GDP for Mainland Norway

Sources: Statistics Norway and Ministry of Finance

Main considerations for fiscal policy

1. Employment and competitiveness

- The budget should not contribute to more rapid interest rate hikes than among trading partners, NOK appreciation and decline in employment in exposed sectors
- Growth higher than trend and unemployment below historical average

2. Ageing – long term fiscal outlook

- Spending of oil money was significantly higher than the 4%-path during the downturn, and this has to be reversed
- Ageing impose a stronger burden on Norway than on the average EU country

Both considerations implies prudent spending of oil revenues

Going forward ...

- The situation in the US and Europe is serious
- Well functioning economies crucial
- Nordic countries could be a source for inspiration
